Eric Aguayo

Senior Solutions & Implementation Engineer

Quito, Pichincha - Ecuador · +593983337611 · me@ericmaster.ninja · ericmaster.ninja · GitHub · LinkedIn · Drupal.org

PROFESSIONAL SUMMARY

Senior Solutions & Implementation Engineer with 15+ years of full-stack and platform delivery, integrations, and cloud infrastructure for media, education, government, and enterprise clients. I combine technical depth in CMS platforms, serverless architectures, and cloud/AI automation with client discovery, cross-functional leadership, and business outcomes. Recent work includes building and tuning production RAG architectures, generative UI protocols, agentic SDLC tooling (Claude Code, Antigravity, Codex, OpenCode), and Zero Trust edge platforms; AI is a differentiator I apply when it improves delivery, not a prerequisite for the roles I seek.

TECHNICAL SKILLS

Drupal / CMS: Enterprise Architecture, Solution Design, Implementation, Integrations, Custom Module Development, Drupal 7/8/9/10 Migration, Decoupled / Headless, Multilingual Multisite, WordPress, Decap CMS, Acquia / Pantheon

PHP: Drupal, Laravel, Symfony

JavaScript / TypeScript: Node, React, Next.js, Vue, Svelte, Express

DevOps & Infrastructure: Platform Delivery, Terraform (IaC), Ansible, Kubernetes (EKS & Self-hosted), GitHub Actions, GitLab Pipelines, Bitbucket Pipelines, GitOps (ArgoCD / Flux), Docker, AWS (EC2, VPC, S3, RDS, DynamoDB)

Cloudflare / Serverless: Cloudflare Workers, Workers KV / D1 / R2, Vectorize / AI Gateway / AI Search, Cloudflare One (WARP), Cloudflare Tunnels, Zero Trust, AWS Lambda, Serverless Framework, Wrangler

Database & Caching: MySQL, PostgreSQL, MongoDB, Redis, DynamoDB

Python: ML / AI, Django, FastAPI, Automation, TensorFlow, PyTorch

MERN Stack: MongoDB, Express, React, Node.js, Next.js

Linux / Bash: Automation, DevOps, Scripting

Version Control & Agile: Git, GitFlow, Scrum, Kanban, JIRA

AI / Agentic Systems: Agents in SDLC, Custom Tooling Harnesses, Domain Specific Languages (DSL), Building & Tuning RAG Architectures, Agentic Frameworks (Supervisor-Worker), Vercel AI SDK (AI SDK Core), Google Gen AI SDK, Cloudflare Agents SDK, Cloudflare AI Gateway, LangGraph, LiteLLM, Prompt Engineering, Hallucination Auditing, MCP, LangChain, OpenAI API, Anthropic SDK, AWS Bedrock, OpenRouter, Generative UI Protocols (A2UI)

AI-Native Development: Cursor, Claude Code, Antigravity, Codex, OpenCode, ChatGPT, Vibe Coding, Automated IaC Generation, AI-Assisted CI/CD

AEO / GEO: JSON-LD, Schema.org, Entity Authority, Knowledge Graph Optimization, Structured Data, Generative Engine Optimization

Flutter / Dart: Flutter, Dart, Mobile, Cross-Platform

WORK EXPERIENCE

Director of Applied AI · Nimblersoft

Feb 2025 – Present · Quito, Ecuador

Directing applied AI engineering and solution delivery across client and internal initiatives, translating operational needs into production-ready AI systems, platform capabilities, and delivery practices.

- Set technical direction for DataOps/MLOps pipelines, serverless platforms, and agentic systems, integrating agents into the SDLC through custom harnesses and supervisor-worker workflows using agentic tooling (Claude Code, Antigravity, Codex, OpenCode), MCP, provider APIs, and internal tooling.
- Led engineering, architecture, and tuning of production RAG architectures and generative UI protocols on Cloudflare Serverless using the Vercel AI SDK (AI SDK Core), Cloudflare AI Gateway, OpenRouter, Workers AI, Workers, D1, R2, Vectorize, and AI Search, optimizing retrieval precision and real-time interaction.
- Guided implementation of a Cloudflare Agents SDK Durable Object for lead collection and human-in-the-loop workflows, preserving a rollback path to the existing Hono service.
- Designed in-process LangGraph orchestration for internal operational workflows covering triage, execution, merge, dependency scanning, and monitoring.
- Directed automation of DataOps/MLOps workflows with GitHub Actions and GitLab Pipelines across AWS (Bedrock, Lambda, EC2, RDS, DynamoDB, S3) to support client and internal platform delivery.
- Established MCP-assisted practices for infrastructure decisions and automation while keeping people accountable for customer-facing outcomes.

Senior AI Software Engineer & Agentic Systems Consultant · Independent Developer / Contractor

Feb 2025 – Present · Quito, Ecuador

Designing and implementing AI-native solutions and integrations for clients and startups, tying technical delivery to customer outcomes.

- Built and tuned enterprise RAG architectures and generative UI protocols for Paftesting/Velir CMS-migration consultancy, establishing ground-truth retrieval evaluation benchmarks, chunking optimization, and hallucination auditing to guarantee factual precision.
- Built **job-posts**, a job-ingestion and fit-scoring application using the Google Gen AI SDK (`@google/genai`) to evaluate job listings against a structured profile with fail-closed authentication, host allowlisting, and disabled tools/function calling.
- Conducted LLM Hallucination Audits for client AI integrations, establishing structured evaluation protocols and flagging schema gaps relevant to answer-engine trustworthiness.
- Implemented Schema.org structured data and JSON-LD markup across multiple client properties to support entity authority and brand discoverability for Generative Engines (AEO/GEO).
- Architected meli.run: Athlete Profile & Blog Platform using React/Next.js, Decap CMS, and GitHub Actions CI/CD with structured data for AI-engine indexability.

Senior Web Developer · REDSpace **Feb 2021 – Feb 2025 · Halifax, Canada**

Delivered high-performance full-stack solutions and scalable infrastructure for top-tier global media brands, bridging the gap between frontend excellence and backend robustness.

- **bleacherreport.com** – Spearheaded full-stack engineering and analytics data library integration for a 50M+ MAU sports platform, optimizing frontend delivery through E2E-tested features and cross-team coordination on library integrations.
- **nypost.com (AdTech)** – Engineered specialized bid-optimization libraries and real-time bidding services, driving the integration, consolidation and optimization of custom and first-party libraries alongside identity-resolution services like LiveRamp, with privacy by design.
- **la.sonychannel.com** – Led the architectural migration of legacy Drupal systems to a modern, decoupled full-stack architecture with Schema.org entity optimization.
- **Enterprise Integration** – Orchestrated complex full-stack deployments including SSO/Identity platforms (LoginRadius) and serverless backend logic (AWS Lambda) for high-traffic utilities like nspower.ca.

Senior Drupal Developer · Taoti **Feb 2020 – Feb 2021 · United States**

Delivered full-stack Drupal platforms for government, health, and NGO clients with emphasis on structured data and AI-engine-friendly architecture.

- wsscwater.com – Architected and launched a responsive Drupal platform serving 1M+ users with complex data migration; implemented Schema.org markup improving knowledge-graph entity coverage.
- lmi.org – Refactored tightly coupled frontend into a decoupled, maintainable architecture, improving page performance and data crawlability for AI engines.
- hfsa.org – Engineered events content system with JSON-LD structured data, improving event entity discoverability in answer engines.
- inee.org – Orchestrated multilingual content search via Apache Solr, enabling structured content retrieval across 5 languages.

Co-Founder & Software Architect · Nimblersoft **Jan 2014 – Feb 2020 · Quito, Ecuador**

Architected and led enterprise platforms for US and LATAM clients, pioneering Knowledge Graph and entity optimization strategies alongside agentic editorial workflows.

- Engineered Agentic RAG Interfaces for content-discovery workflows, integrating AI-assisted editorial pipelines that reduced content production time by 25%.
- Implemented Schema.org optimization initiatives across 15+ client properties, establishing entity authority frameworks that improved generative engine citation rates.
- usfq.edu.ec – Orchestrated Digital Marketing web development team; redesigned institutional platform in Drupal with high-availability infrastructure and Schema.org entity graphs for institutional authority.
- help.blackboard.com – Architected scalable Drupal migration with a semi-autonomous multilingual translation workflow, optimizing structured content for AI-engine indexability across 10+ languages.

Drupal Lead Developer · Devsu **Feb 2011 – Dec 2013**

Led Drupal development and supported the growth of the development team through hands-on technical leadership and training.

- Trained developers in Git and PHP.
- Built and maintained Drupal sites including cotopaxi.k12.ec and quicentro.com.ec.

Java/PHP Developer · Oshyn Inc. **May 2008 – Jul 2010**

Contributed Java and PHP development to client web projects.

- Contributed to the development of eamobile.com and icon4x4.com.

EDUCATION

Master in Artificial Intelligence **2026 (4.00/4.00 GPA)**
Universidad San Francisco de Quito

Engineering in Systems Engineering and Mathematics **2008 (3.91/4.00 GPA)**
Universidad San Francisco de Quito

CERTIFICATIONS & LANGUAGES

Certified Developer **2015**
Acquia

Spanish (Native) · **English** (Advanced) · **French** (Basic)

SELECTED PROJECTS

Quiz Generator
A Svelte-based web application for a Quiz generator, created using Vite [*Svelte, Vite*]

Docker VSCode Server Tunnel
A dockerized version of VSCode accessible remotely via vscode.dev [*Docker, VSCode*]
